

SMAQMD Demolition / Renovation Exemptions

I certify, under penalty of perjury, that in order to receive a permit from the Rancho Cordova Building & Safety Division, the demolition for the renovation activities shown on this plan is exempt from SMAQMD approval.

This project will meet the following requirements, as per SMAQMD Rule 902, Section 110 Exemptions:

- Renovations or demolitions of residential facilities comprised of four or fewer dwelling units (with exceptions) are exempt
- The amount of RACM at the facility is less than:
 - (a) 260 lineal feet on pipes, or
 - (b) 160 square feet on other facility components, or
 - (c) 35 cubic feet off facility components where the length or area could not be measured previously

I am aware that if this project is found to not conform to the above exceptions, I will be held fully responsible for any legal and financial penalties for non-compliance with SMAQMD rules, and state and federal statutes. Any demolition or renovation permits issued by the Building & Safety Division found to be non-compliant will be void, and new applications, with applicable penalties, will be required.
